

One & only Mobile App U2/UX Design Masterclass with Figma

△ left panel

△ right panel

△ increase the scale of interface

↳ Alt + Ctrl + Shift + =

△ reduce the scale of interface

↳ Alt + Ctrl + Shift + -

△ add a version history

↳ Ctrl + Alt + S

⚠ Using Figma online & offline

Available offline

- Create layers, including frames, basic shapes, boolean operations, and vector networks.
- Create and use components that are local to your file.
- Make changes to layer properties, including fill, stroke, dimensions, position, layer order etc.
- Run plugins that don't rely on external browser APIs. You will only be able to use plugins that you have already installed.
- Save your files to your computer in .fig format. This will save a copy of the file as it currently exists, and doesn't include any comments or version history.

Not available offline

- Access or browse the Figma file browser.
- Create new files, or open files that you don't already have open.
- Receive updates from other collaborators on files you have open.
- Search for components from libraries or insert instances from a library.
- Install new plugins, or run plugins that require external browser APIs.
- View a file's version history, or create new versions to save your changes to Figma.
- Use any multiplayer features, like seeing who is active in the file, observation mode, and multiplayer cursors.

⚠ Zoom In / Out in Canvas

↳ holding Ctrl (CMD) + mouse wheel

⚠ V → move tool

K → scale tool

⚠ frame represents some kind of a container for other elements and components

⚠ undo → Ctrl + Z

redo → Ctrl + shift + Z

⚠ group → Ctrl + shift + G

⚠ Frame properties

- X, Y coordinates
- W, H (width & height)
- angle & corner radius

⚠ shape tools

- rectangle
- line
- arrow
- ellipse
- polygon
- star
- place image

⚠ P → Pen

Shift + P → Pencil

⚠ Boolean options

⚠ you can create a frame & set it as a thumbnail

⚠ image effects

⚠ Color styles →
example

Group / Color Name

"Primary / red"

⚠ text style naming is similar to color style

⚠ create a component

↳ Ctrl + Alt + K

⚠ Component properties

├── text
├── boolean
└── swap

⚠ We can group components as variants

⚠ cursor char → / (slash symbol)

⚠ A design system is basically a collection of reusable components guided by clear standards that can be assembled together & build any number of applications
