

Introduction to Software Product Management

⚠ Normal tasks of a product manager

⚠ Validation → making the right product
Verification → making the product right

⚠ who are great software managers?

⚠ Agile Practices are guidelines that suggest how software development should occur to get the best results

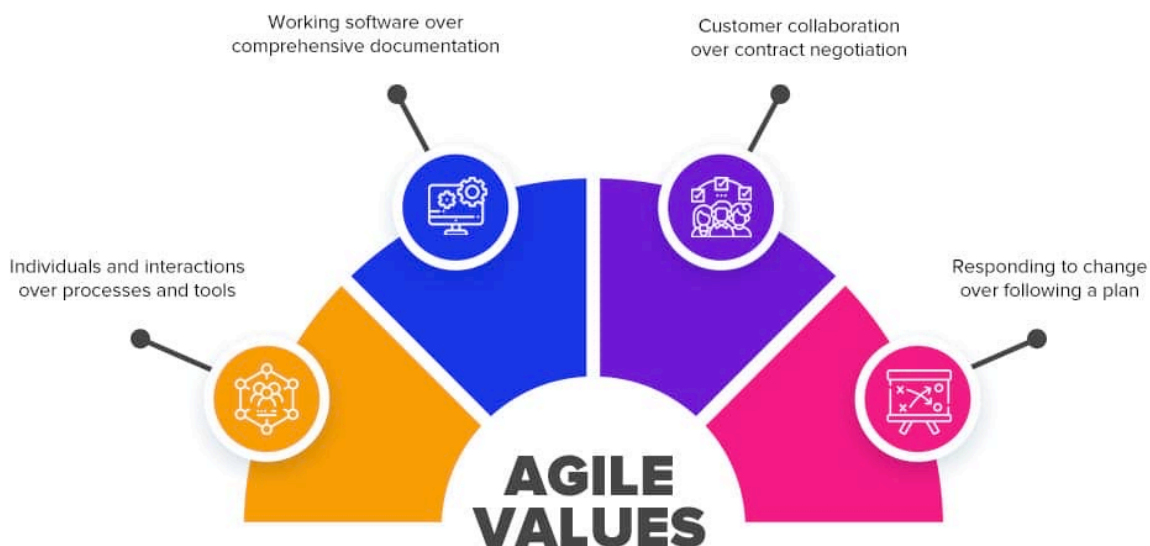

⚠ How to Define Project Success?

other criterias

- amount of post-released bugs
- customer rating
- revenue generated
- client satisfaction

⚠ Agile Values

⚠ The highest priority is to satisfy the customer through early and continuous delivery of valuable software

⚠ The more frequent your software delivery is, the more opportunity the client has to provide input on development

⚠ working software is the primary measure of progress

⚠ Agile processes promote sustainable development. The sponsors, developers, and users should be able to maintain a constant pace indefinitely

⚠ General Software development processes

- └→ ① specification
- └→ ② Design & Implementation
- └→ ③ Verification & Validation

⚠ Requirements generate product features

⚠ what problems can be solved through monitoring?

- └→ Adapting to changing product requirements
- └→ Meeting project plan deadlines
