

# client needs and Software requirements

⚠ Requirements

↳ specific descriptions of your client's needs

⚠ Product done right  $\neq$  right product

⚠ Eliciting requirements  $\neq$  gathering requirements

has more investigation

⚠ Business requirements outline purpose of a software

⚠ Business rules constrain how the product functions

⚠ Use cases are the good way to show the relationship between the system and the user

⚠ functional requirement

└ a behaviour that the product should do or support

⚠ non-functional requirements

└ serve as a description of "how well" a product must perform

└ types

└ accuracy

└ dependability

└ security

└ usability

└ efficiency

└ Performance

└ maintainability

⚠ External interface requirements

└ outline where the product is situated  
(how connects or communicates)

## ⚠ physical setting requirements

↳ describe how the product should be designed

## ⚠ vision

↳ the long-term strategic concept of the ultimate purpose and form of a new system

## ⚠ vision vs. scope

Vision	Scope
encompasses what the product will eventually do to satisfy a user's need	encompasses what can be realistically achieved within the current project

## ⚠ How to defend against scope creep

- ↳ Have the client prioritize requirements
- ↳ make expectations clear
- ↳ Draw the scope with your client
- ↳ Ask "Is this in scope?"
- ↳ Evaluating the impact of proposed changes

⚠ requirements → what / design → how

⚠ end user ~ who's this product for

└ types

└ primary, secondary, and tertiary

⚠ types of user's limitations

└ perceptual limitations (ex: color blindness)

└ physical limitations (ex: left-handed people)

└ cognitive limitations

└ cultural limitations

⚠ ways of eliciting user's requirements

└ interview end-users

└ conduct feasibility studies

└ watch end-users using the product

└ consult user manuals for similar products

└ create a glossary for the product

⚠ Use "Asking why" technique to understand the client's requirements better

## △ Use case

↳ a way to identify, clarify, and organize the details of a task

## △ Use case consists of:

Name	
Participating Actors	
Goals	
Triggers	
Pre-Condition	
Post-Condition	
Basic Flow	
Alternate Flows	
Exceptions	
Qualities	

## △ Use case Diagram

↳ high level visual representation of all the tasks supported by the product

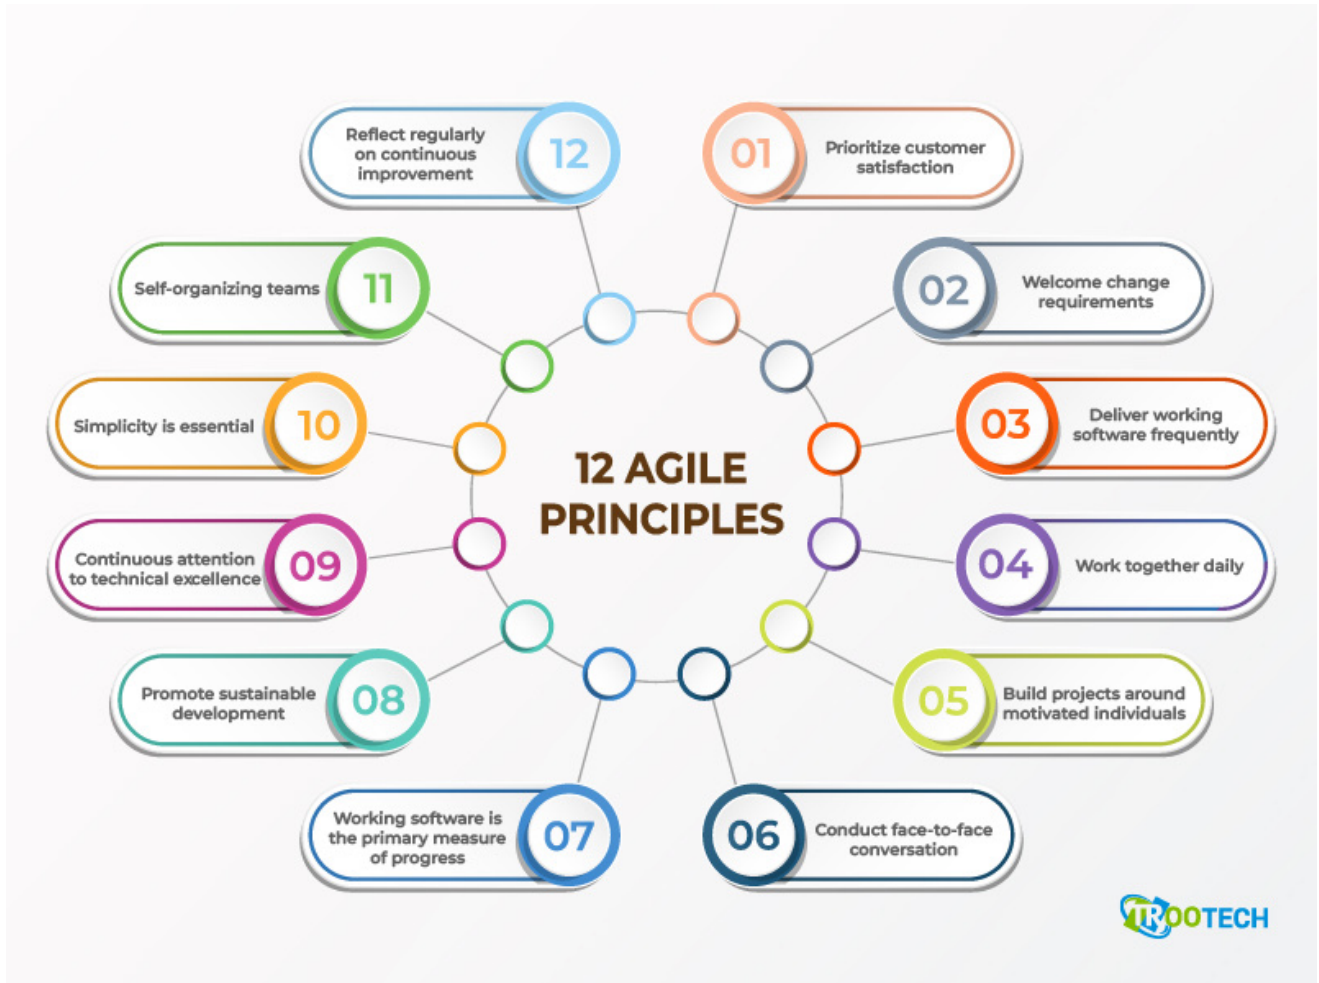

## △ wireframe

↳ a basic visual representation of a product. Another term for a wireframe is a mock up

## ⚠ Storyboard

- ↳ a sequential, visual representation of an interaction
- ↳ shows the communication & interaction of software pages

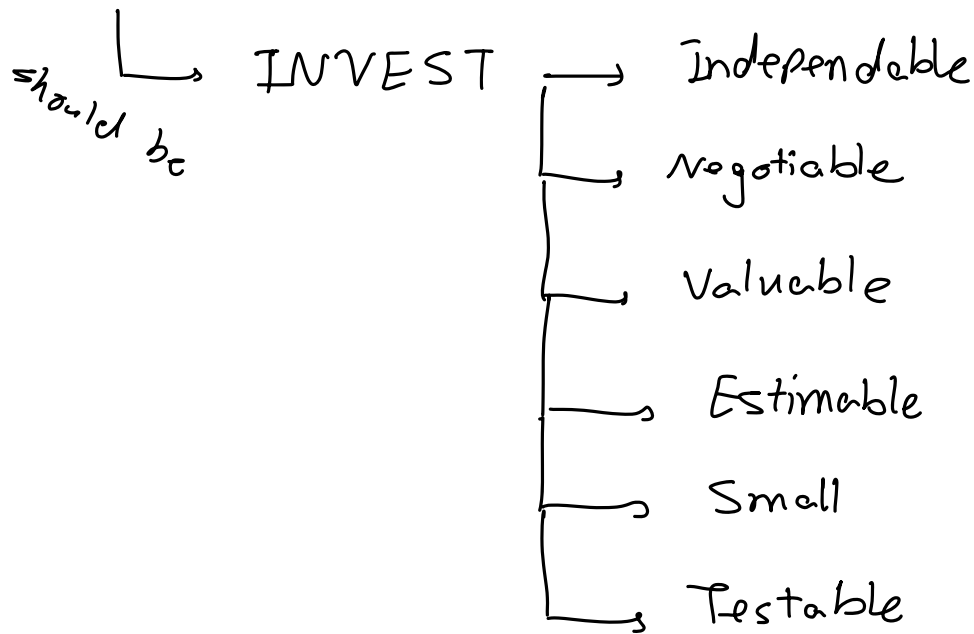

## ⚠ Agile Principles

⚠ A user story is a simple way of expressing requirements

↳ format { as a \_\_\_\_\_,  
I want \_\_\_\_\_,  
so that \_\_\_\_\_.

⚠ A good user story is one which clearly outlines a specific software requirement in the product

⚠ An "Epic" is a user story that is nearly insurmountable. They're vague, broad descriptions of a requirement

⚠ An "Acceptance Test" is a check for whether a requirement is met

⚠ Acceptance Criteria are specific conditions which must be met

⚠ A product backlog is a list of software features which you and your team intend to develop

└ isn't just limited to user stories

⚠ In Scrum, Product owner is responsible for creating and prioritizing user stories

⚠ Story Maps are a great way of representing your product backlog with more visual detail

↳ gives perspective how user stories relate

⚠ High quality user stories should be

- ↳ correct
- ↳ complete
- ↳ clear
- ↳ consistent
- ↳ feasible
- ↳ traceable

⚠ Ambiguous Requirement Categories

- |                    |                    |
|--------------------|--------------------|
| ↳ indirect words   | ↳ quantities       |
| ↳ vague words      | ↳ pronouns         |
| ↳ Persuasion words | ↳ positional words |
| ↳ completion words | ↳ temporal words   |
| ↳ qualifiers       | ↳ joining words    |
| ↳ comparatives     |                    |

⚠ indirect words ~ may, will, ---

⚠ vague words ~ processed, operated, handled, ---

⚠ completion words ~ and so on, ---

⚠ Persuasion words ~ dearly, obviously, ---

⚠ Qualifiers ~ all, none, often, only, ---

⚠ comparatives ~ Car A is bigger than Car B

⚠ quantities ~ some, most, few, ---

⚠ Pronouns ~ them, him, it, ---

⚠ Positional words ~ after, before, following, ---

⚠ temporal words ~ when, for, until, ---

⚠ Joining words ~ and, or, both, ---
